

Instructor: Chris Atkinson

Course webpage: <https://ckatkinson.github.io/1102>

Email: catkinso@morris.umn.edu

Office: Science 2340

Phone: 589-6321

Office Hours: M 2:05-3:05, T 10-11, W 3-4, R 9-11*, F 10:30-11:30, or by appointment (*make appointment on my Google calendar for Thursday office hours)

Textbook: “Single Variable Calculus, Early Transcendentals”, sixth edition, by James Stewart.

Prerequisites: Math 1101

Topics covered: We will cover most of the sections in chapters 6-11 of the textbook. This includes techniques of integration, applications of integration, infinite sequences and series, and differential equations. See <https://ckatkinson.github.io/1102/1102-topics.pdf> for a detailed list of sections to be covered along with a list of problems.

Time commitment: University policy says “one credit is defined as equivalent to an average of three hours of learning effort per week (over a full semester) necessary for an average student to achieve an average grade in the course”. Our course is a five-credit course, meeting approximately five hours per week: 5 credits times 3 (hours/week)/credit - 5 hours/week in lecture = 10 hours/week outside class. Thus, you are expected to spend 10 hours per week working outside of class, reading the textbook and working problems. Since no one wants to be average, you should expect to **spend at least ten hours per week independently thinking about class.**

Class meetings: We meet on Monday, Wednesday, and Friday for 65 minutes and on Tuesday for 100 minutes. We will begin most class periods with a period of group discussion on problems assigned during the previous class meeting. After this discussion period, I will lecture on the main ideas and techniques needed for understanding the textbook. On most Tuesdays, we will have a quiz. See below for more details on what I expect from you.

Homework:

- **WeBWorK:** WeBWorK is an online homework system. You can find our section either through the course webpage or by going directly here: http://webwork.morris.umn.edu/webwork2/S19Calc2_Atkinson/. A few problems will be assigned for each section of the textbook that we cover. These problems are intended to give you practice working through core examples. These assignments will usually be due one minute before the Monday, Wednesday, and Friday class meetings.
- **Practice problems:** I can tell you what to think, but I can't think for you. To learn how to think about calculus, you need to think about the ideas yourself. To do so, you should work through many example problems.

The document at <https://ckatkinson.github.io/1102/1102-topics.pdf> details the list of practice problems. In each row, I've listed a selection of practice problems. After we

cover a section in class, you should work through as many of these problems as you need to to master the topic. In addition, when I write the exams, I consider any problem similar to assigned practice problems to be fair game.

These problems will not be formally collected or graded, but see the following section to see what you will be turning in. You should come talk to me, talk to your classmates, or email me.

- **Discussion problems:** This course has homework due most days. Usually, I will post a short subset (usually just two or three) of the practice problems on the course webpage. These are the discussion problems. I expect you to work together in small groups to solve these problems. Working collaboratively allows for you to help each other out when you get stuck and to learn from explaining your thoughts. You should produce a neat write-up to the solution of each of these problems. You should also be prepared to present your solutions to the class. Occasionally, discussion problems will be replaced with an in-class activity.

During the first 15 – 20 minutes of class, we will discuss the discussion problems. You will have some time to compare your solutions. I will walk around the class to answer questions and choose presenters. We will typically have one or two quick presentations of solutions. I will keep track of who has presented. Everyone should expect to present occasionally.

Each Friday, I will collect your work from discussion problems from the week. You should turn in the neatly written and complete solutions to the problems. These will be graded for completion, correctness, and exposition. I'll also give feedback on your work.

During the discussion period, I will go around the room to select presenters. I will also be looking to check that you have completed the problems for the day.

Your overall grade for the discussion problems will be based both on the problems you hand in and on participation. Participation will be assessed as follows: each student starts with a bank of three *participation points*. There are three different possible *participation infractions*:

- (1) Absence: an unexcused absence during the discussion portion of class.
- (2) Unpreparedness: arriving to the discussion session without having given an honest effort on the discussion problems.
- (3) Non-presentation: refusing to give a presentation.

A student will lose one participation point if a participation infraction is committed. Lost participation points can be earned back by turning in a complete, neatly written solution set to an **entire section** of practice problems (see list of practice problems). If the list of practice problems includes non-specific directions such as “skip around”, your submitted set must include at least 15 problems. I will accept such a set at any point on or before the last day of instruction. You may only submit a solution set for a given section once (but feel free to submit any number of sections).

At the end of the semester, the balance of your participation point bank will be used to determine a *participation multiplier* for your discussion problem grade. I will multiply your grade for the collected discussion problems by the participation multiplier. The following table describes how the multiplier will be determined:

Point Balance	Multiplier
3	1.025
0, 1, 2	1
-1	0.9
-2	0.75
-3	0.5

Quizzes: On Tuesdays (except for during exam weeks), we'll have a short quiz. The material on the quiz will cover through what we have done in class through the previous Friday. These quizzes give you a chance to practice exam-type problems with time pressure.

Exams: There will be three in-class exams and a cumulative final. You will not be allowed any outside material on your desks during exams. Calculators will not be allowed during exams.

The exams are tentatively scheduled as in the table below. The dates of Exams 1-3 are subject to change depending on the dynamics of the class. You will be given sufficient advanced notice if any of the dates change.

	Date
Exam 1:	Tuesday, February 19 (Week 5)
Exam 2:	Tuesday, April 2 (Week 11)
Exam 3:	Tuesday, April 30 (Week 15)
Final:	Tuesday, May 14 1:30-3:30pm

Grading: The university's policy for grades can be found at: <http://policy.umn.edu/Policies/Education/Education/GRADINGTRANSCRIPTS.html>

I grade homework assignments, quizzes and exams with the above guidelines in mind using the following numerical scheme. I reserve the right to change the grading scale at any point, but will not increase the requirements for any letter grades.

Letter	Percentage
A	95-100
A-	90-95
B+	86-89
B	83-86
B-	80-83
C+	76-69
C	73-76
C-	70-73
D+	65-69
D	60-64
F	≤ 59

The components of the course will be combined to calculate your grade as follows:

WeBWorK	15%
Discussion problems	15%
Quizzes	20%
Unit exams	30%
Final Exam	20%

Although I will not be posting grades online, feel free to ask at any point about where you stand in the course.

Extra Credit: There will be no extra credit.

University policies: See <http://policy.umn.edu/education> for the official university policies on education. I will adhere to these policies.

Late work and missed exams: I will only accept late work under exceptional circumstances. Please talk to me as soon as possible if you miss a deadline.

Makeup exams will only be given in the case of legitimate absences as defined by the official university policy: <http://policy.umn.edu/Policies/Education/Education/MAKEUPWORK.html>. Legitimate absences must be supported by appropriate documents unless otherwise specified by university policy.

If you have a scheduling conflict and will miss an exam for a documented reason, let me know as far in advance as possible so that we can make arrangements for you to take the exam at another time.

Disability Accommodations:

The University of Minnesota views disability as an important aspect of diversity, and is committed to providing equitable access to learning opportunities for all students. The Disability Resource Center (DRC) is the campus office that collaborates with students who have disabilities to provide and/or arrange reasonable accommodations.

- If you have, or think you have, a disability in any area such as, mental health, attention, learning, chronic health, sensory, or physical, please contact the DRC office on your campus (UM Morris 320.589.6178) to arrange a confidential discussion regarding equitable access and reasonable accommodations.
- Students with short-term disabilities, such as a broken arm, should be able to work with instructors to remove classroom barriers. In situations where additional assistance is needed, students should contact the DRC as noted above.
- If you are registered with the DRC and have a disability accommodation letter dated for this semester or this year, please contact your instructor early in the semester to review how the accommodations will be applied in the course.
- If you are registered with the DRC and have questions or concerns about your accommodations please contact the Coordinator of the Disability Resource Center.

Additional information is available on the DRC website: <http://www.morris.umn.edu/academicsuccess/disability/>, or e-mail hoekstra@morris.umn.edu
